PROPOSAL · PRD · POC PLAN

Election Intelligence & Analytics Command Center

Unified data. Trusted analytics. AI-assisted intelligence. Faster decisions.

Prepared for the leadership of [AGENCY NAME]

by [COMPANY NAME] — AI + Data + Digital Intelligence Partner

September 2026 · Confidential · For initial approval discussion

[Client logo placeholder — official assets only with authorisation]

[COMPANY LOGO]

EXECUTIVE VISION

From fragmented data to a continuously learning intelligence loop

Understand what is changing, where, why it may be changing — and how operations are performing

Data	Intelligence	Insight	Decision support	Measurement	Learning loop
Governed, registered, quality-scored sources	Statistics, forecasting, anomaly detection, multilingual NLP	What changed, where, plausible why — facts vs interpretation	Prioritised operational & monitoring follow-ups; humans decide	Every action has a KPI and a baseline	Results recalibrate models, KPIs and playbooks

Learning loop: measured outcomes feed back into data, models and KPIs every week

AI on a trusted data layer

LLMs answer only from verified, lineage-tracked data — with citations

Humans stay in charge

Analysts interpret; leadership decides; AI drafts and flags

Every number is traceable

Source, timestamp, quality and uncertainty on every tile

WHY CAMPAIGN INTELLIGENCE MATTERS NOW

2026 campaigns need speed — and an audit trail

20 Mar 2026

ECI: political ads on electronic media incl. social media need MCMC pre-certification; internet spend must be reported

≥ 10%

ECI advisory (24 Oct 2025): AI/synthetic campaign content labelled on ≥10% of display; records of AI material kept

3 hours

Removal window for deepfake / unlawful content (ECI advisories; IT Amendment Rules 2026 for intermediaries)

14 May 2027

DPDP Rules 2025 fully in force — privacy-by-design, security safeguards and 1-year logs

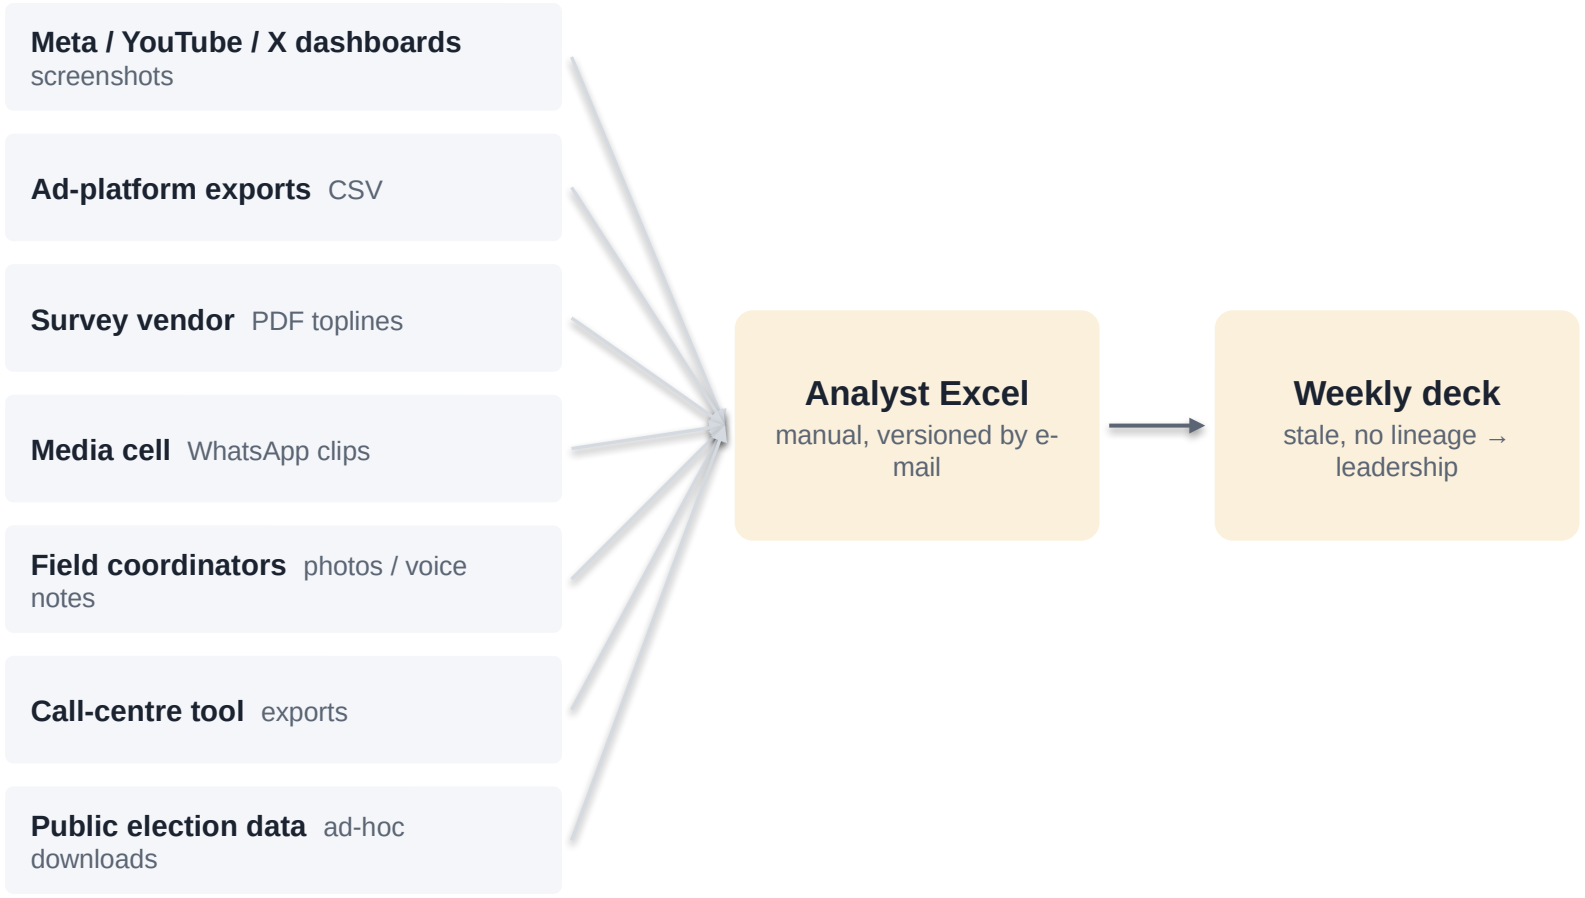

What this means for leadership

- Decisions must move faster than the news cycle — hours, not days
- Every paid or AI-assisted item needs approval, certification and label records
- Teams must work from one set of defensible numbers
- AI is useful only on top of verified, governed data
- Human judgement remains essential — the system supports it

Sources: ECI press notes/advisories as reported (Appendix L1, L3, L6); MeitY IT Amendment Rules 2026 (L8); DPDP Rules 2025 (L13). Not legal advice — verify against primary documents.

THE CURRENT PROBLEM

Fragmented workflows create blind spots at the worst possible time

Six blind spots

- ✕ Teams report different numbers
- ✕ Days of latency before leadership sees change
- ✕ No uncertainty on survey or sentiment figures
- ✕ No systematic early warning / anomaly detection
- ✕ No audit trail for approvals, certification, AI labels
- ✕ AI summaries without verified source data

OUR SOLUTION

One governed intelligence layer, not seven disconnected workflows

Dimension	Today	With the Command Center
Source of truth	Multiple spreadsheets and decks	Governed warehouse + metric store (one definition per KPI)
Latency	Weekly, manual	Daily report by 08:00; intraday for priority sources
Early warning	Someone notices	Statistical alert engine — Critical / High / Medium / Low
Uncertainty	Absent	Margins of error, intervals and coverage warnings by default
Cross-source view	Social, media, survey, field in silos	Common issue taxonomy, geography and time keys
AI	Unverified summaries	Grounded AI Analyst with citations, timestamps, confidence
Compliance	Approvals in chats	Control tower: approvals, MCMC refs, AI labels, spend, audit trail
Security & privacy	Shared credentials	SSO, MFA, RBAC, encryption, audit logs, DPDP-aligned

COMMAND CENTER CONCEPT

Intelligence infrastructure — not just analysts

Executive Command Center
Health score · 14 modules · alerts · reports

AI intelligence layer
Grounded Q&A · summaries · decision-support briefs

Analytics, ML & multilingual NLP
Statistics · forecasts · anomalies · topics · sentiment

Governed data foundation
Registry · quality · lineage · security · privacy

Capability pillars

DATA	AI	ANALYTICS
SOCIAL INTELLIGENCE	MEDIA INTELLIGENCE	DIGITAL MEASUREMENT
FIELD INTELLIGENCE	AUTOMATION	COMMAND CENTER

“We do not simply provide analysts. We build the intelligence infrastructure that turns fragmented campaign data into a continuously learning decision-support system.”

DATA ECOSYSTEM

Six source families — each with owner, lawful basis, retention

A Official / public

- ECI statistical reports & index cards
- Historical results (ECI; curated research sets)
- Census & official indicators
- Public candidate disclosures

B Campaign-owned (authorised)

- Website & social analytics
- Ad-platform reporting
- CRM / volunteer / event records (consented)
- Call-centre operational data

C Survey

- Issue, awareness, satisfaction surveys
- Event & campaign feedback
- Weighting, MoE, bias & QC metadata
- Consent recorded

D Digital platforms

- Meta, Instagram, YouTube, X, Google
- Owned-account insights via permitted APIs
- Ad transparency libraries
- API access verified per platform

E Media

- News sites & feeds (public/licensed)
- Regional & hyperlocal outlets
- Broadcast transcripts — licensed only
- Search trends where available

F Field

- Daily structured field reports
- Activity completion & coverage
- Local issue reports
- Volunteer activity metrics

DATA SOURCES & ACCESS REALITY

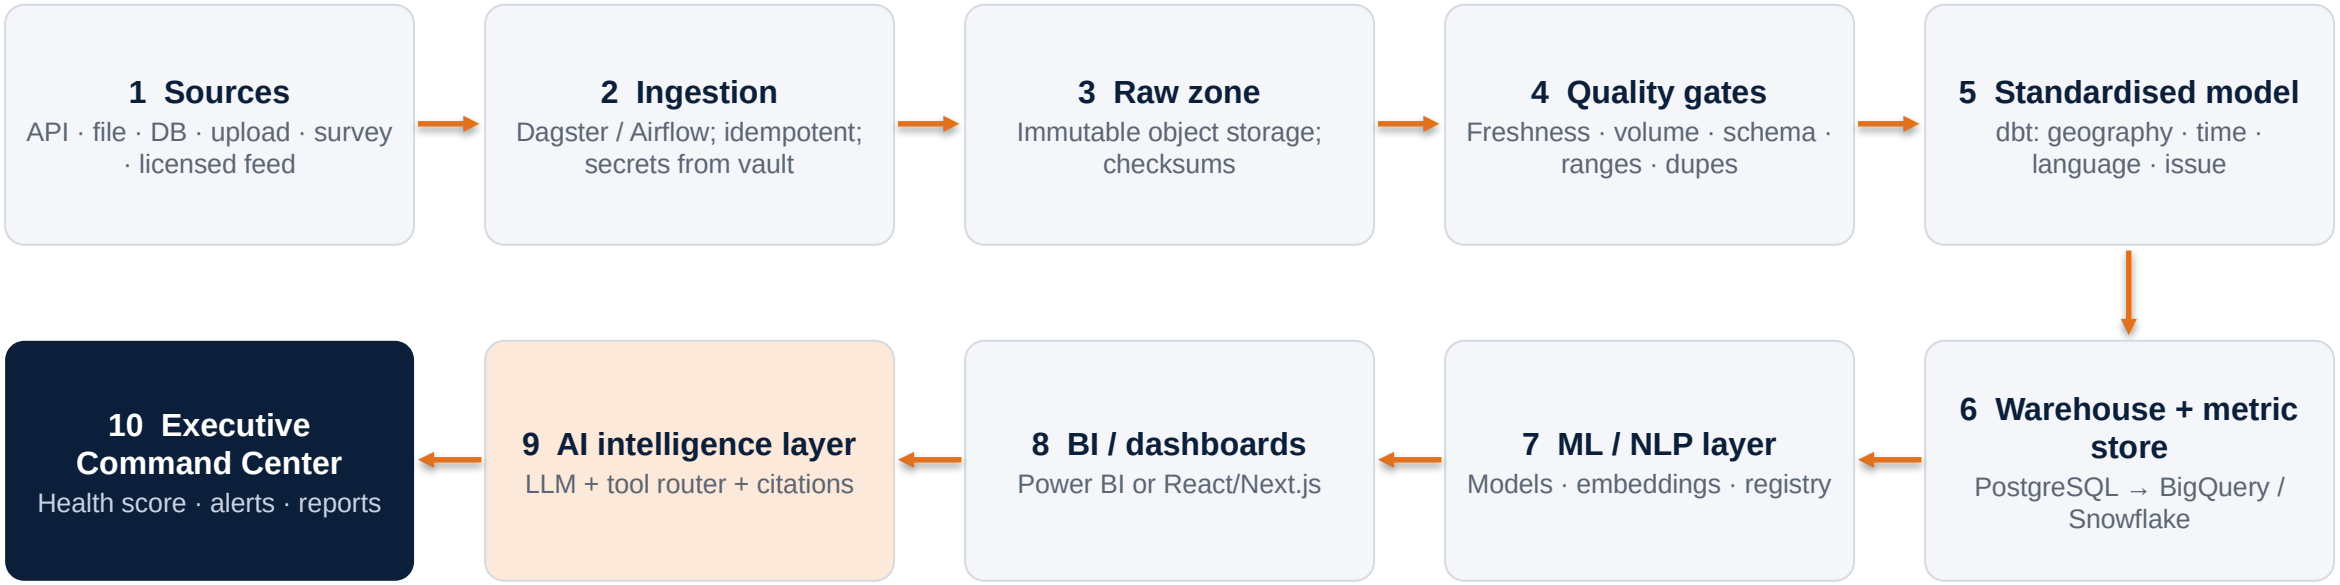

We never assume an API exists — access is verified in Week 1

Platform / source	Likely access route	What must be verified (as of Sep 2026)
Facebook Pages	Graph API insights for owned pages	App review, permissions, fields available
Instagram	Instagram Graph API (Business/Creator)	Basic Display API ended 4 Dec 2024
Meta ads & Ad Library	Marketing API (owned); Ad Library API	Identity/country verification; disclaimers
Meta public content	Meta Content Library	Researcher-only (ICPSR); CrowdTangle closed Aug 2024
YouTube	Data API v3; Analytics API (owned)	Quotas; channel authorisation
X	X API (pay-per-use credits)	Budget caps, read limits, current terms
Google Ads / Search	Google Ads API; Transparency Center	Election-ads verification; ECI pre-certificate per ad
Google Trends	Web; Trends API alpha (gated)	Alpha access not assured — indicative only
Website	GA4 Data API; Search Console	Consent mode; no PII in events
Listening / media vendors	Licensed feeds	Lawful sourcing, licence scope, audit rights

API availability and permitted fields must be verified against the current platform documentation and access level.

DATA ARCHITECTURE

Production-grade pipeline from source to executive decision

Cross-cutting governance & security

Source & lawful-basis registry · permitted-use tags · column-level lineage · RBAC/SSO/MFA · encryption · immutable audit logs · retention & deletion · model registry · cost guardrails

DATA MODEL & ANALYTICS STACK

Aggregate, authorised records joined on geography, time and issue

Reference & public

- campaign
- constituency
- geography
- historical_election
- issue

Intelligence facts

- survey_response (anonymous)
- content_performance
- media_mention
- sentiment_record (aggregate)
- field_activity · event
- operational_metric
- campaign_spend

Governance & operations

- data_source
- data_quality
- compliance_record
- alert · report
- model_run
- audit_log

By design there is no table of individuals' political beliefs or preferences. Survey microdata is anonymous, binned and used only for weighted aggregates.

Analytics maturity ladder

Decision support
Operational, monitoring & data-quality priorities; humans decide

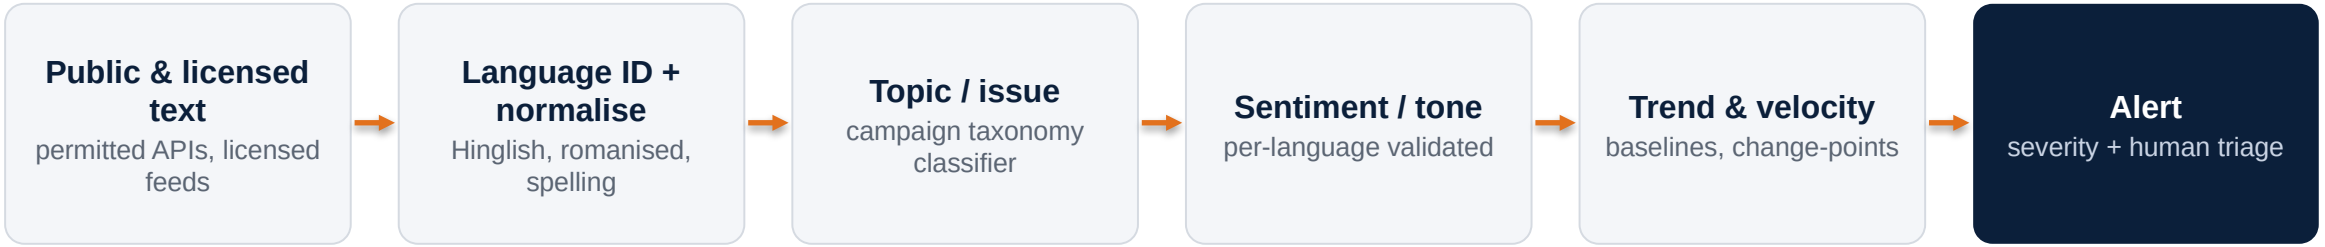

Predictive
What is likely next? Forecasts with intervals, assumptions, validation

Diagnostic
Why did it change? Channel, content, geography, issue decomposition

Descriptive
What happened? Trends, KPIs, channel & historical comparison

AI / NLP LAYER

Multilingual NLP: listening → topic → sentiment → trend → alert

Languages

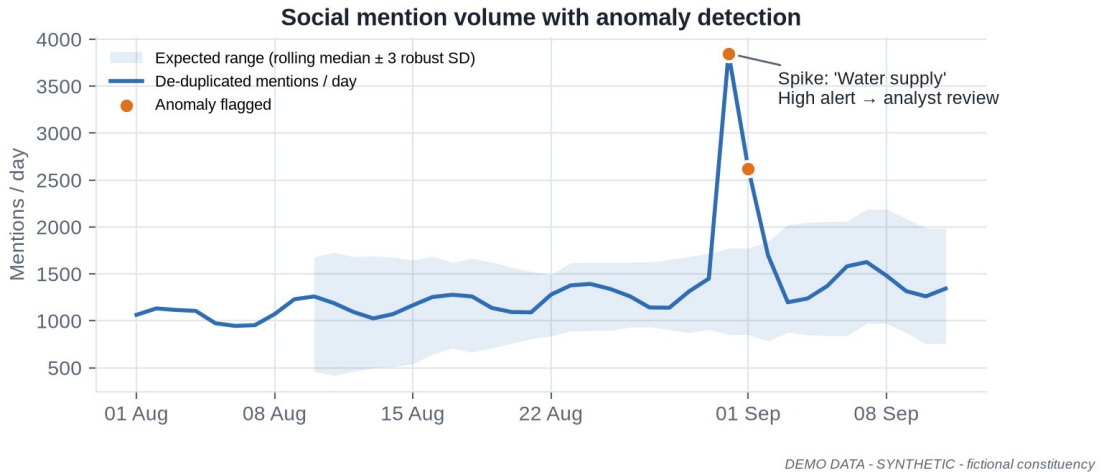

Hindi · English · Hinglish · Regional languages · Romanised Indian languages

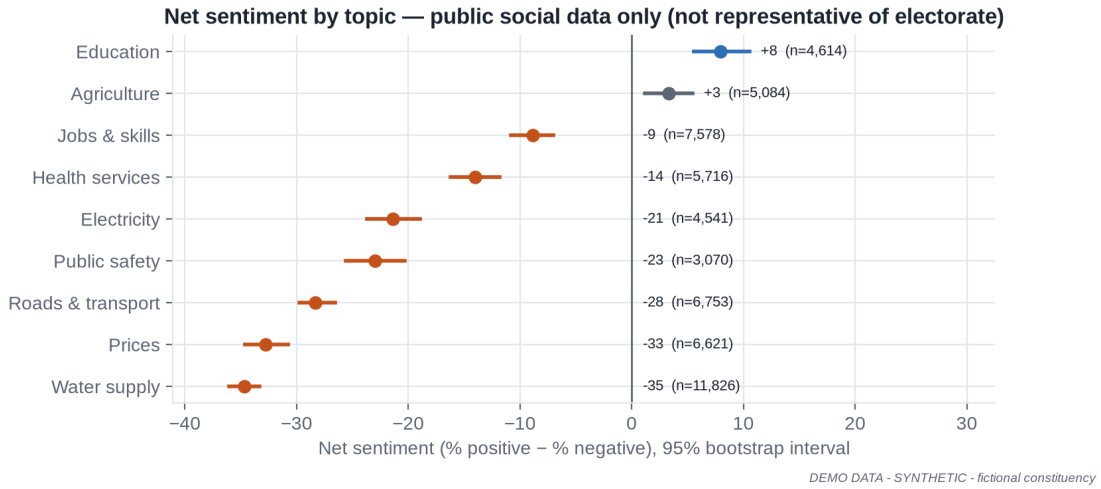

- Also: NER · event detection · duplicate / copy detection · toxicity · misinformation-risk flags (always human-verified)
- Gold sets per language, double-annotated (κ ≥ 0.70); POC gate macro-F1 ≥ 0.70 per language

Capability	Approach	Metric
Topic / issue	Fine-tuned multilingual encoder	Macro-F1 / language
Sentiment / tone	Encoder + calibration	Macro-F1, per-class recall
Emerging topics	Embeddings + clustering	Coherence, analyst rating
Duplicates	MinHash + cosine	Pair precision / recall
Translation	IndicTrans2 (22 languages)	Human spot-check
Misinformation-risk	Claim-matching + heuristics	Precision@k (human-confirmed)

DEMO DATA — SYNTHETIC

Detect change — and state how much of the conversation we see

3,849
mentions on 31 Aug vs 1,314 prior-week median
High alert · Water supply

43.5%
negative share (de-duplicated, 6 weeks)

18.1%
posts with usable public location — coverage limit

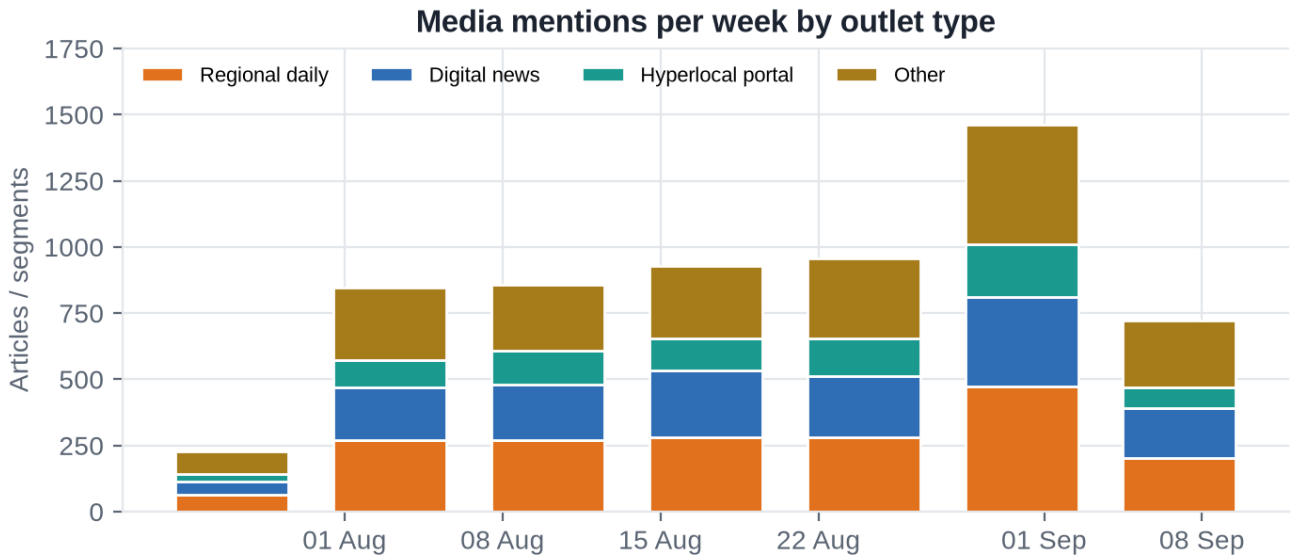

7.0%
near-duplicates removed before counting

- Modules: volume · sentiment · topic trends · issue velocity · engagement · platform comparison · amplification by account type · emerging issues
- Every tile carries a Coverage & Representativeness Index

Public social data is not the electorate. Sentiment describes visible online conversation only.

DEMO DATA — SYNTHETIC

Multilingual media monitoring — licensed where required

DEMO DATA - SYNTHETIC - fictional constituency

1,030
items in the last 7 days

53.6%
regional & hyperlocal share

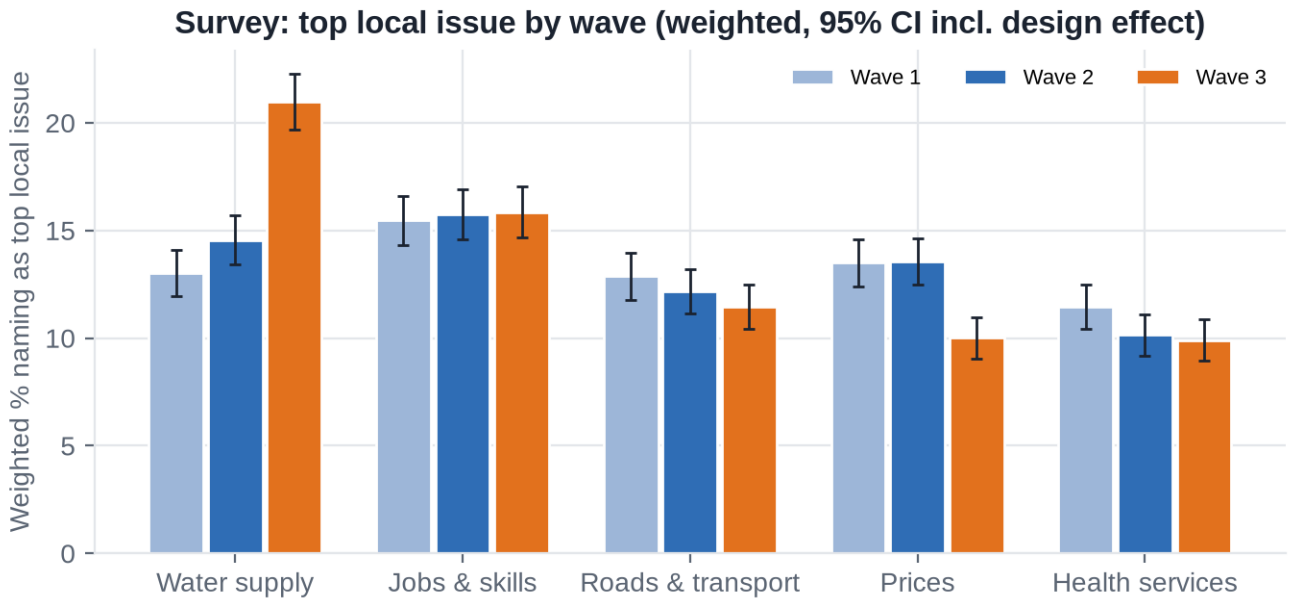

24.3%
negative tone, last 7 days

Media Intelligence Dashboard

- Article & segment classification by issue
- Topic extraction & story threads across outlets
- Tone towards tracked entities, with confidence
- Candidate / organisation mentions (NER + entity linking)
- Issue share of voice by outlet type & language
- Regional-language outlets prioritised
- Broadcast transcripts — only where licensed
- Volume & tone alerts; daily AI summary with citations

DEMO DATA — SYNTHETIC

Statistically defensible — every estimate carries its uncertainty

Methodology built in

- Sampling design & sample-size calculator
- Post-stratification / raking with trimmed weights
- Design effect → effective n → honest MoE
- Weighted cross-tabs with small-cell suppression
- Significance tests with multiple-comparison control
- Speeders, straight-liners, interviewer & mode checks
- Non-response & profile bias checks

+8.0 pts water-supply salience, Wave 1 → Wave 3

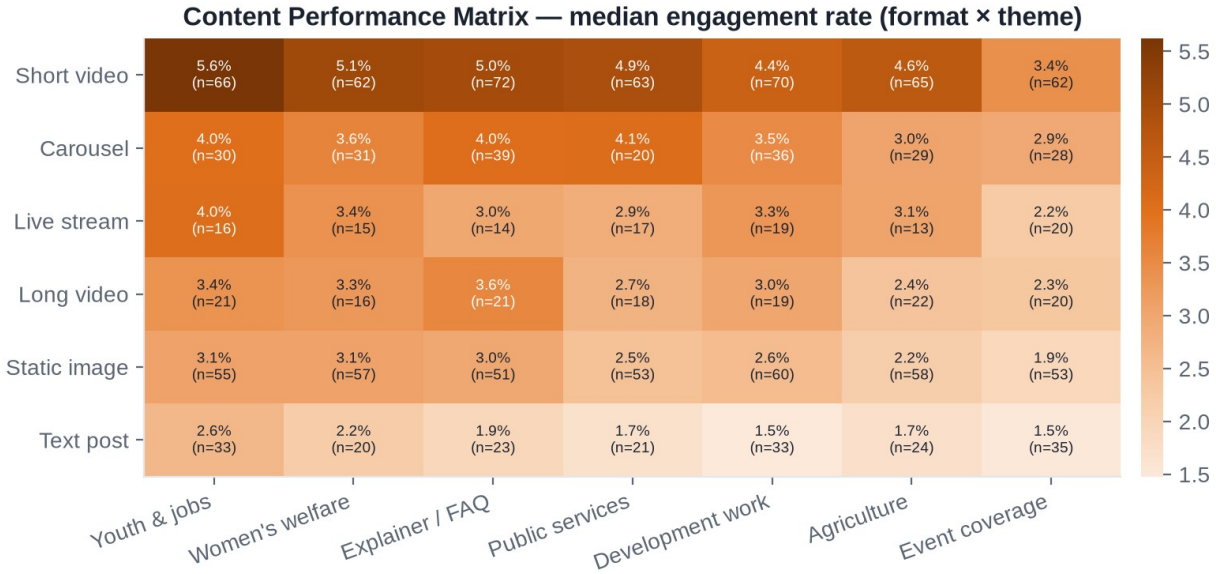

13.0% → 21.0% ± 1.3 (95% CI, n_eff 3,704); significant (z ≈ 9). QC excluded 3.5% of interviews.

Surveys describe the sampled population at fieldwork time. They do not guarantee or predict results.

DEMO DATA — SYNTHETIC

Digital Performance Scorecard and Content Performance Matrix

9.21 M	3.49%	1.50 M	1.11%	₹116	100%
impressions (7 days)	engagement rate	video views	click-through rate	CPM (boosted)	boosted items with MCMC ref
+0.9% W/W	+0.18 pts W/W	−3.8% W/W	−0.03 pts	+4.5% W/W	Compliant

DEMO DATA - SYNTHETIC - small cells (n<25) should be read as directional

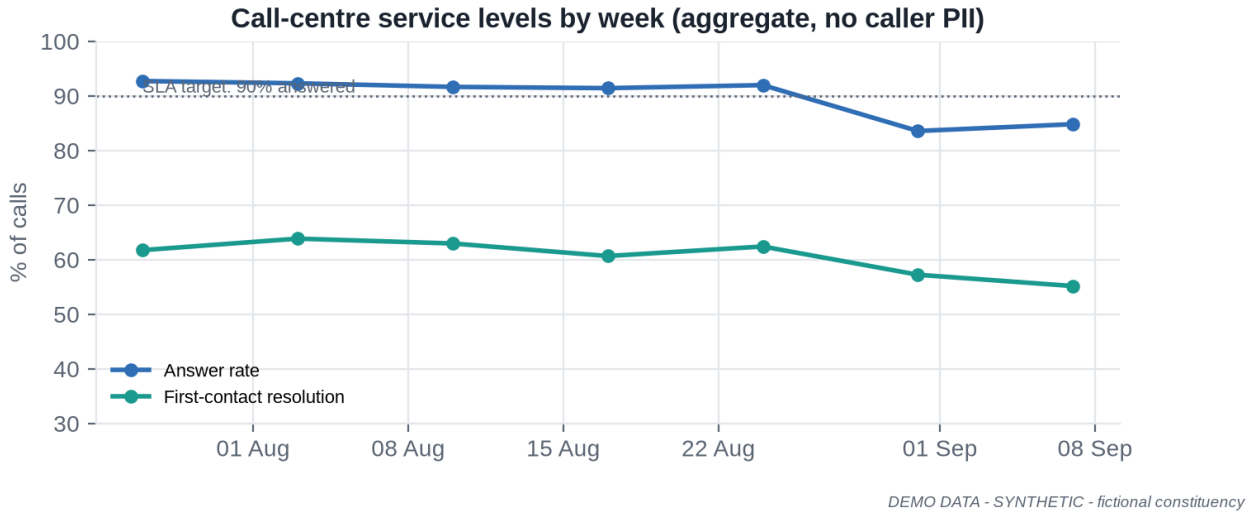

What leadership learns

- Short video leads engagement across themes (~1.8× static images)
- Explainers and youth & jobs content over-index
- Test before scaling: pre-registered experiments with power analysis

Format & theme planning at aggregate level — never individual-level targeting.

DEMO DATA — SYNTHETIC

See where operations are behind — and why

DEMO DATA - SYNTHETIC - fictional constituency

84.4%
answer rate, 7 days

SLA 90% — breach

55.6%
first-contact resolution

37 s
median wait (answered)

Call-centre analytics use aggregate operational data only — no private communications, no inference about callers' views.

Field operations (last 7 days)

83.2%
activities completed (target 85%)

79.3%
reports submitted on time

67.4%
Hill Block completion

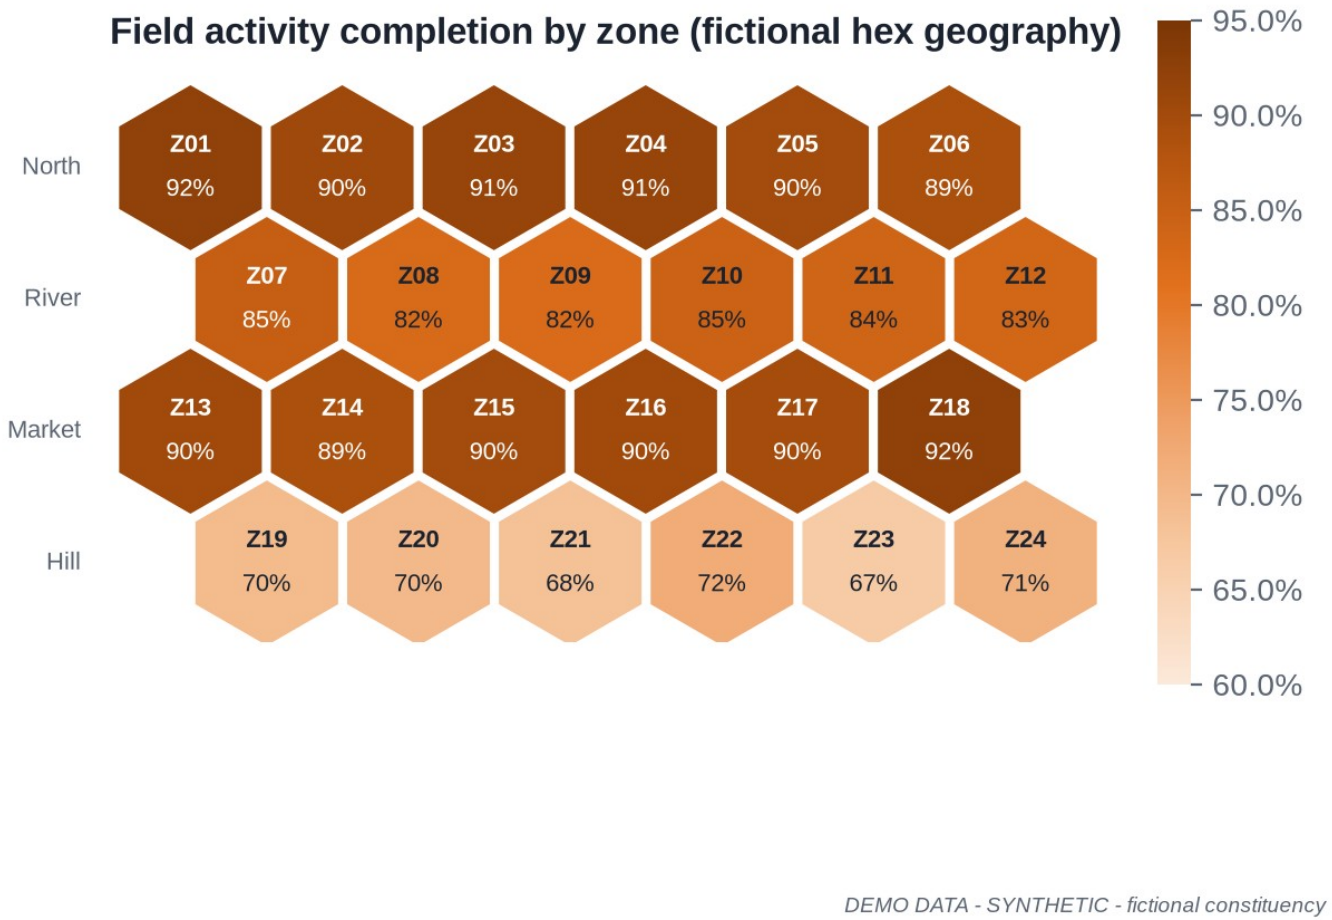

Bottleneck

1,842
local issue reports logged

- Tracks completion, coverage, attendance estimates, response time, submission quality
- Bottleneck list with named owners; late-report reconciliation avoids false alarms

DEMO DATA — SYNTHETIC

Aggregate maps for coverage — never individual targeting

DEMO DATA - SYNTHETIC - fictional constituency

Map layers

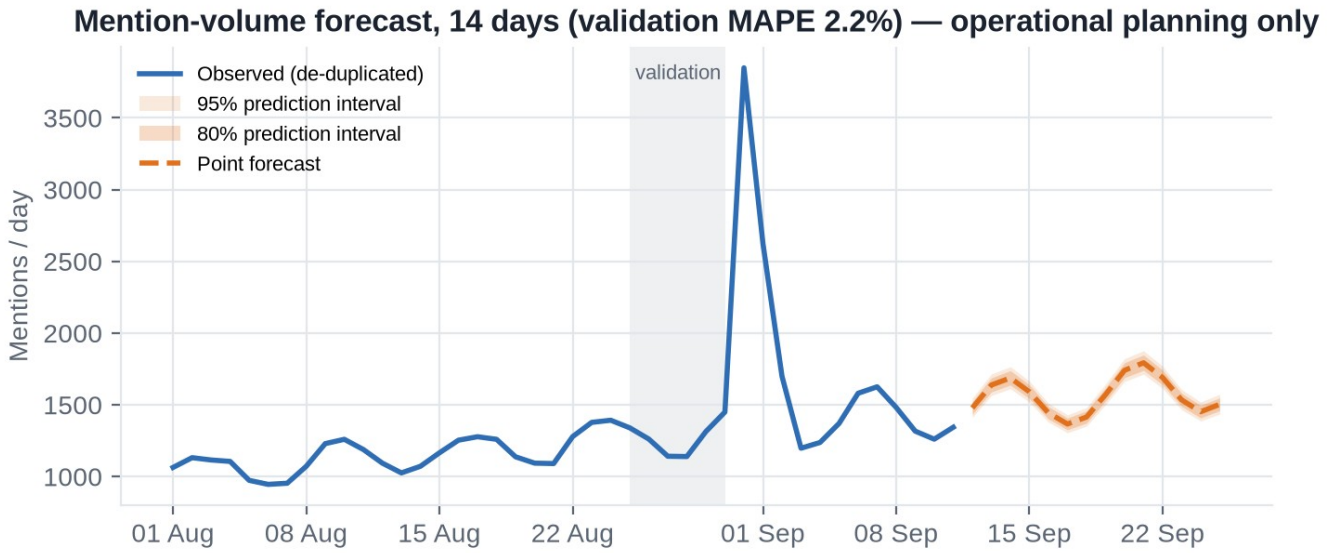

- Constituency & admin boundaries
- Historical results (public)
- Turnout trends (public)
- Survey coverage
- Campaign activity coverage
- Event locations (public events)
- Issue distribution
- Media distribution
- Operational coverage

Guardrails

- No household or individual plotting
- Small-area suppression (cells < 10 hidden)
- Official Survey of India boundaries for any national/state outline
- Delimitation vintage recorded for every boundary layer

DEMO DATA — SYNTHETIC

Forecasts with intervals and validation — never certainty

DEMO DATA - SYNTHETIC - fictional constituency

Model toolkit (fit for purpose, simplest first)

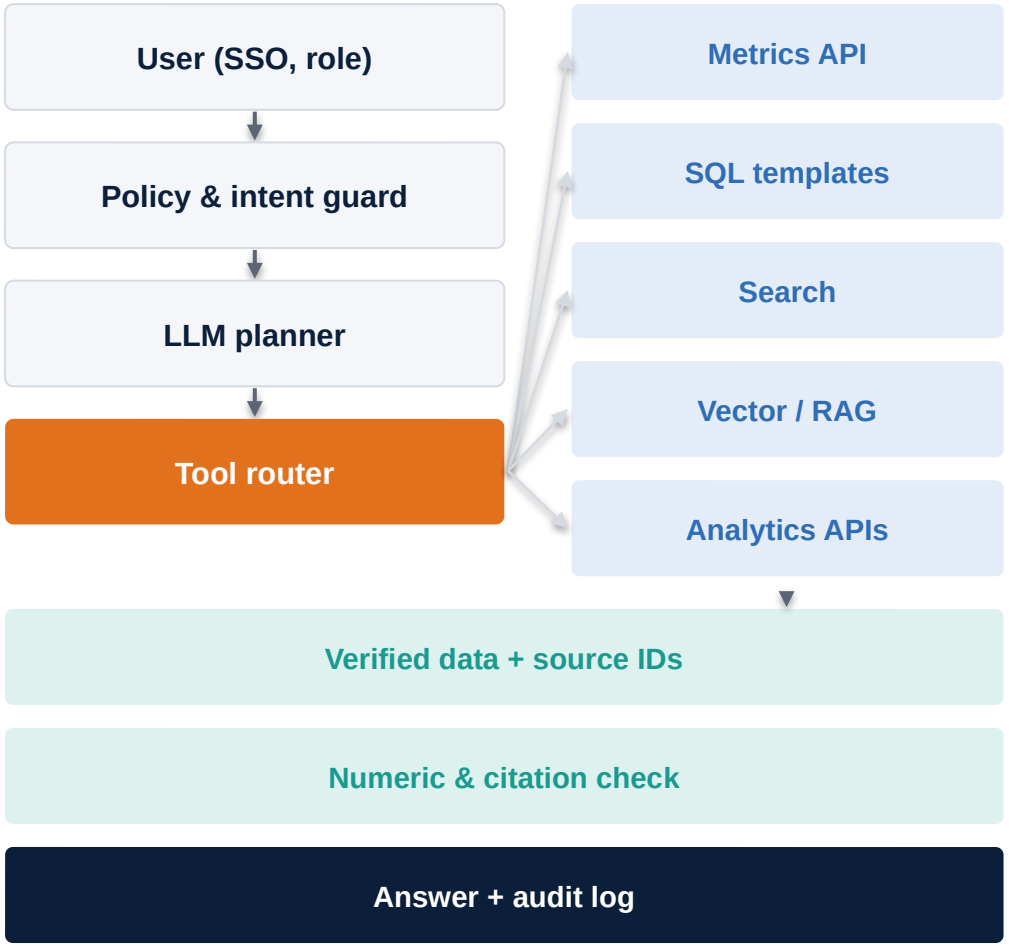

Regression	Logistic regression	Classification	Clustering
Time-series	Anomaly detection	Random Forest	Gradient boosting / XGBoost
PCA	Topic modelling	Embeddings	Similarity search

Model card	issue_volume_forecaster v0.3
Purpose	Monitoring-capacity planning
Training window	01–24 Aug (validation 25–30 Aug)
Method	Trend + weekly seasonality (OLS)
Validation	MAPE 2.2% (synthetic; real error higher)
Assumptions	No new shocks; stable platform access
Limitations	Cannot anticipate events
Human review	Signed off by Lead Data Scientist
Status	Approved — internal planning only

No model infers an individual's political preference

AI CAMPAIGN ANALYST

Grounded answers with citations, timestamps and confidence

What changed in the last 24 hours?

FACTS

- Public mentions 3,849 vs prior-week median 1,314 — High anomaly [social.mentions_daily · alert A-0931]
- 61% of mentions on Water supply [model M3 v1.2]
- Regional media on the issue: 123 items vs 9.9/day [media.mentions_daily]
- Helpline answer rate 85% vs 90% SLA [ops.call_answer_rate]

INTERPRETATION

Signals are consistent with a local service-disruption story; geographic spread uncertain (18% geo-coverage).

FOLLOW-UPS

Validate with field issue reports; review helpline category mix; consider a survey item in next wave.

Confidence: Medium · data as of 07:00 IST

Refuses: profiling · persuasion · predictions

REAL-TIME ALERT ENGINE

Four severity levels, owners and response clocks

CRITICAL	Compliance-breach risk, priority pipeline outage, security incident, extreme KPI anomaly	**Ack ≤ 15 min · act ≤ 1 h**
HIGH	Significant anomaly (> 4 robust SD), fast-growing issue, high-reach media story	**Ack ≤ 1 h**
MEDIUM	Notable movement (3–4 SD), sustained trend change, data-quality degradation	**Same day**
LOW	Informational deviations, stale approvals, minor forecast misses	**Weekly review**

Alert catalogue

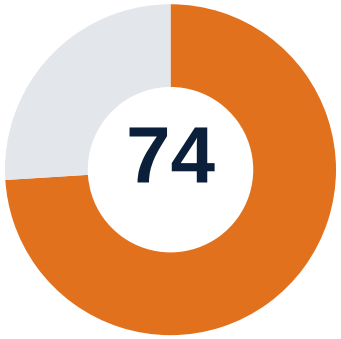

- Social-volume spike
- Abnormal sentiment movement
- Viral content
- Digital-performance movement
- Media spike
- Pipeline failure
- Survey anomaly
- Data-quality deterioration
- Compliance deadline
- Abnormal spend
- Unexpected KPI movement
- AI label missing

EXECUTIVE DASHBOARD

DEMO DATA — SYNTHETIC

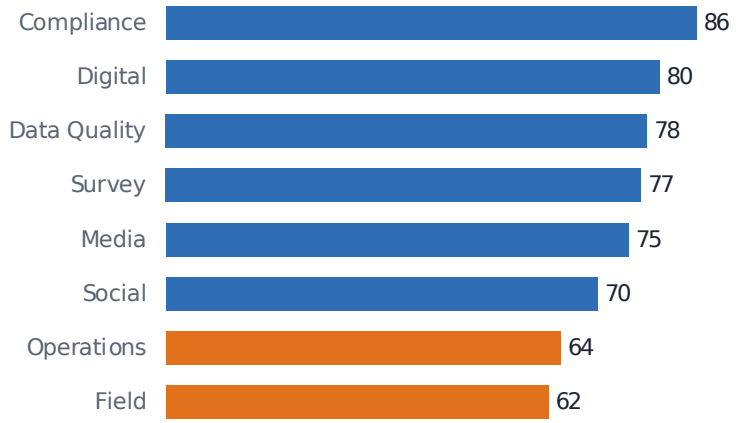

One screen, eight domains, drill-down to 14 modules

Overview Digital Social Issues Media Survey Field Geo Forecast Alerts Compliance Data Quality AI Analyst Reports

Campaign Intelligence Health
AMBER · operational, not electoral

Domain scores (0–100)

Top changes · last 24 h

- H — Helpline answer rate 84% < 90% SLA
- M — Hill Block completion 67% (target 85%)
- M — X connector latency — amber source

DEMO DATA — SYNTHETIC

Approvals, certification, AI labels, spend — one audit trail

Item	Type	Approval (owner · time)	MCMC certification	AI disclosure / label	Spend	Alert
CT-0417	Paid video	Approved · Compliance · 12 Sep 16:42	Certified · MCMC-DEMO-0417	AI-generated · label ✓ · entity ✓	₹1.8 L	—
CT-0422	Paid carousel	Approved · Compliance · 12 Sep 18:05	Applied · awaiting	Not AI	₹0.9 L	**Block publish**
CT-0425	Organic video	Legal review	Not required (organic)	**AI-assisted edit · label ✗**	—	**CRITICAL**
CT-0431	Bulk SMS	Approved · Compliance · 13 Sep 10:11	Certified · MCMC-DEMO-0431	Not AI	₹0.4 L	—
CT-0433	Paid static	Draft	—	Not AI	—	—
SP-TOTAL	Digital spend	Finance reconciled 13 Sep	—	—	82% of limit	**HIGH**

Rules engine (configured by legal)

- Paid item without certification ref → block “ready”
- AI flag without label → Critical
- Scheduled post inside silence window → block
- Takedown notice unactioned at 2 h → Critical (3 h limit)

Regulatory anchors (verify with legal)

- MCC & social media — ECI 2013
- MCMC pre-certification — ECI 20 Mar 2026
- AI labels & records — ECI 24 Oct 2025
- SGI labelling — IT Rules 2026
- Silence period — RP Act s.126
- Exit polls — RP Act s.126A

SECURITY & DATA GOVERNANCE

Enterprise controls from day one — privacy by design

✓

RBAC + RLS

Least privilege by role & geography

✓

SSO

SAML / OIDC with agency IdP

✓

MFA

Mandatory; passkeys for admins

✓

Encryption

At rest (KMS) · in transit (TLS 1.2+)

✓

Secrets

Vault; scanning; no creds in chat

✓

Audit logs

Immutable; ≥ 1 yr; 180 d in India

✓

Key rotation

≤ 90 days; revoke on exit

✓

Environments

Dev / test / prod separated

✓

Backup & DR

PITR; RPO ≤ 1 h; RTO ≤ 4 h

✓

Incident response

CERT-In 6 h path; DPDP breach workflow

✓

Retention

Per-source schedules; deletion certs

✓

Vendors

DPAs, residency, audit rights

Data governance

- Source & lawful-basis registry
- Permitted-use tags enforced at query time
- Data dictionary & metadata
- Column-level lineage
- Consent / authorisation tracking
- Minimisation & purpose limitation
- Quality monitoring on every source
- Exit plan: export + deletion certificate

RESPONSIBLE AI

Human oversight, no fabrication, full traceability

Human oversight	**No fabricated information**
No unsupported prediction	**Explainability**
Source traceability	**Data minimisation**
Privacy	**Security**
Bias monitoring	**Model monitoring**
Synthetic-content safeguards	**Compliance review**

Aligned to MeitY India AI Governance Guidelines (Nov 2025), NIST AI RMF, ISO/IEC 42001.

AI-assisted analytics

Internal analysis & drafting

- Topic/sentiment models
- Forecasts
- AI Analyst answers

Controls

Model governance · citations · human review

AI-generated content

Any AI-produced text/image/audio

- Draft summaries
- Translations
- Internal visuals

Controls

Marked internal · reviewed before any external use

AI-generated campaign creative

Synthetic media published for campaigning

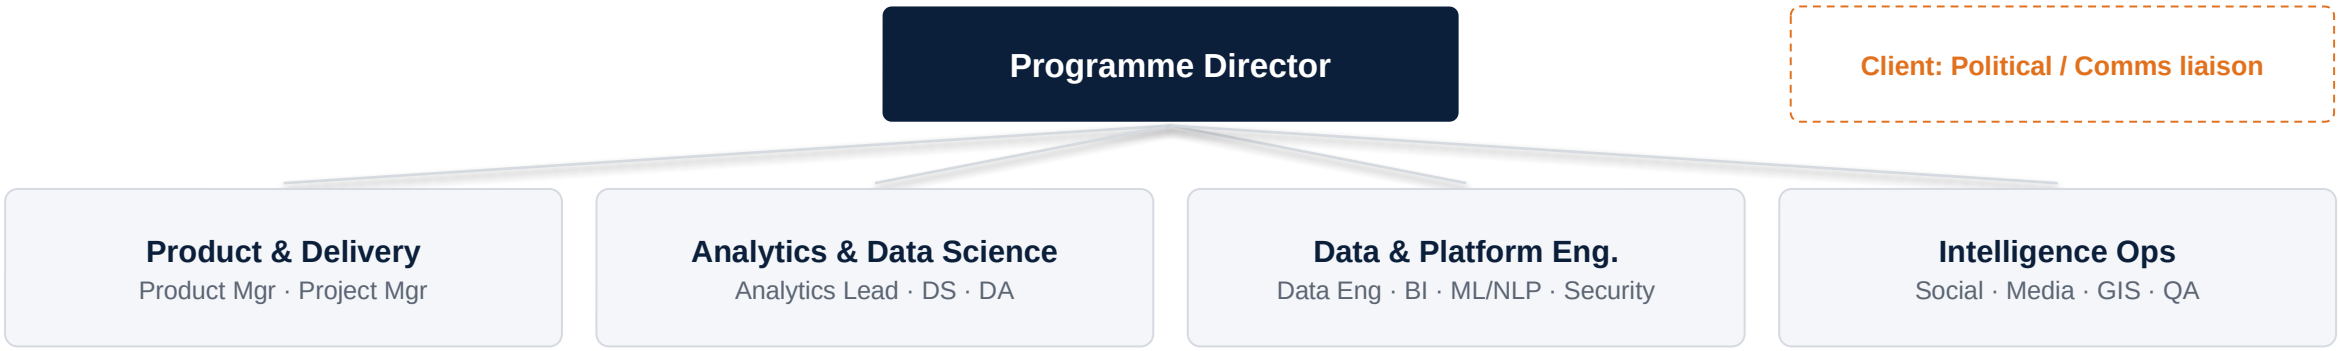

- AI video/image/audio ads
- AI-altered posts

Controls

ECI label ≥10% · entity disclosed · records · 3-h takedown · not generated by this platform

TEAM STRUCTURE

A multidisciplinary intelligence team — sized to the election

A · POC / MVP

5–7 people · 4–6 weeks

- Analytics Lead
- Data Scientist
- Data Engineer
- ML/NLP Engineer
- Data Analyst
- PM (+0.5 BI, shared Director & Security)

B · Single constituency / by-election

8–15 core people · + ops support

- + 2nd Data Scientist, 2–3 Analysts
- Social & Media analysts
- BI Developer, QA/Data Ops
- 0.5 GIS, 0.5 Security/Privacy

C · Multi-constituency / state

20–50+ people · 24×7 war-room

- Domain leads per module
- 4–8 DS · 6–12 DA
- Language pods for social/media
- 24×7 Data Ops rota · annotators

THE DATA SCIENTIST ROLE

Converting data into statistically defensible decision-support

“A Data Scientist is not just someone who builds ML models; the role is to convert data into statistically defensible decision-support.”

1

Statistics & surveys

- Statistical analysis
- Survey analysis
- Trend detection
- Uncertainty estimation
- Bias checks

2

Forecasting & detection

- Forecasting
- Anomaly detection
- Model validation
- Model monitoring

3

Language & AI

- NLP
- Sentiment analysis
- Topic modelling
- AI-agent development
- RAG analytics

4

Measurement

- Content-performance analysis
- Experiment analysis
- Attribution (where valid)
- KPI modelling

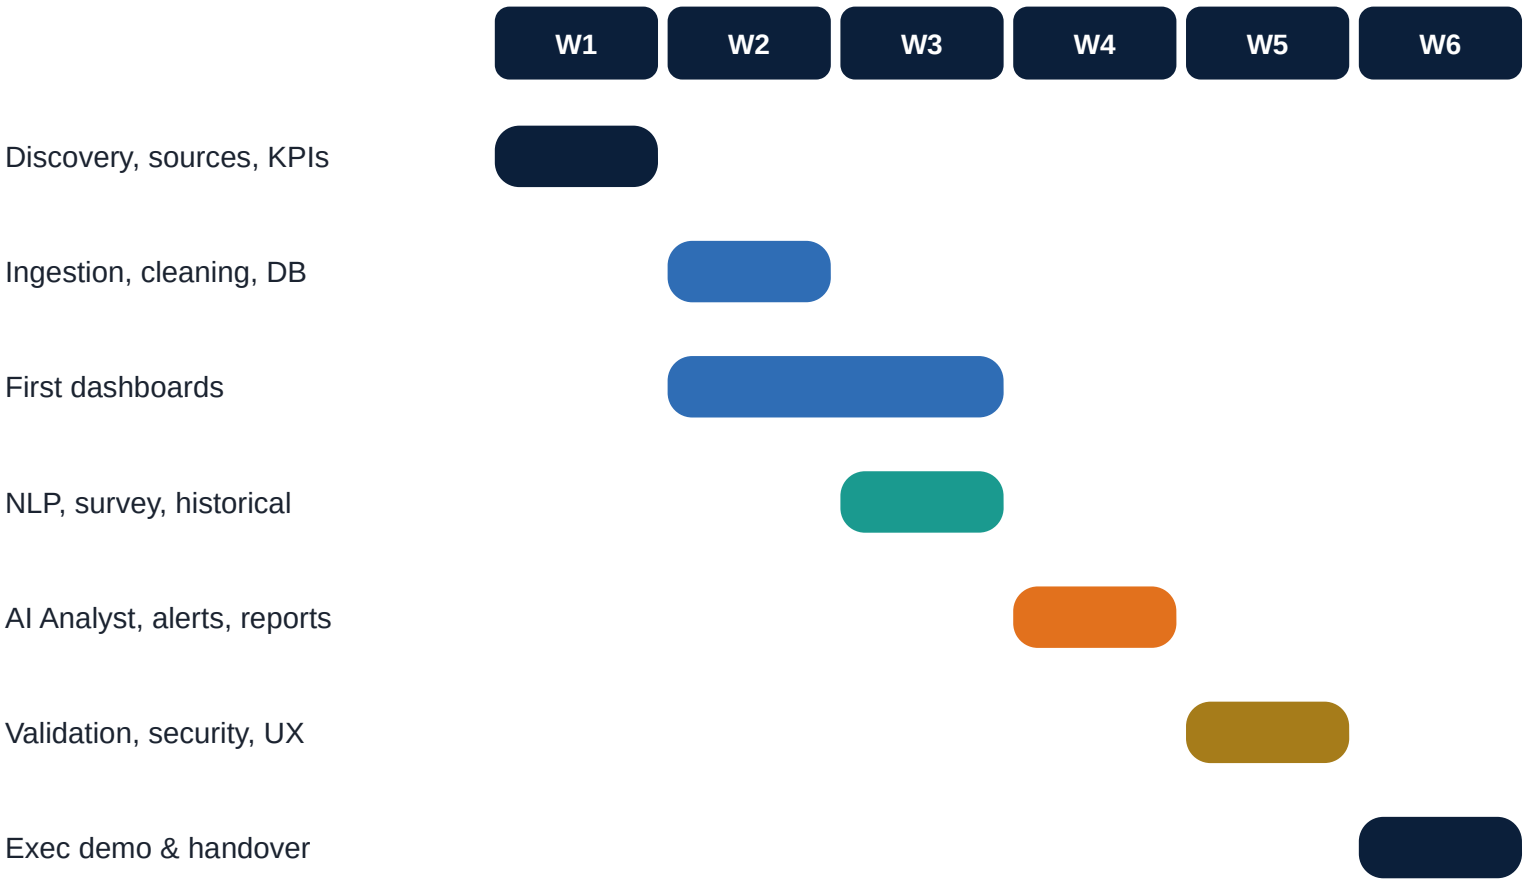

5

Trust & communication

- Data-quality analysis
- Executive insights
- Automated reporting
- Reproducibility
- Documentation

PROOF OF CONCEPT

4–6 weeks to a working Command Center on realistic DEMO data

Acceptance criteria (13)

- ✓ Dashboards P95 < 3 s
- ✓ ETL ≥ 99% success, 5 days
- ✓ Lineage for 10/10 sampled tiles
- ✓ NLP processes 50k texts
- ✓ Sentiment macro-F1 ≥ 0.70 / language
- ✓ Issue detection ≥ 90% of test events
- ✓ AI: 0 fabricated numbers; 100% refusals
- ✓ Citations + data-as-of on every answer
- ✓ RBAC: 0 exposures in 40 tests
- ✓ Audit log captures 100% of events
- ✓ Daily report ≥ 70% auto-drafted
- ✓ Alerts at correct severity ≤ 5 min
- ✓ Model card for every model

Demo: fictional Aranyapur AC · 100,000 synthetic records · every screen labelled DEMO DATA

TECHNOLOGY POC

A lean, production-ready POC stack

Python · FastAPI · PostgreSQL · pgvector/FAISS · SentenceTransformers · LLM · scheduled ETL

Power BI / React UI · Streamlit prototypes

FastAPI service — SSO token, RBAC, audit middleware

LLM + tool router (AI Analyst) · report generator

PostgreSQL + metric views · pgvector / FAISS index

NLP pipeline: LID → normalise → topic/sentiment/NER → embeddings

Scheduled ETL (Dagster / cron): raw → quality tests → dbt models

Method	Endpoint	Returns
GET	/dashboard/overview	Health, domains, KPI strip
GET	/social/trends	Volume, anomalies, sentiment CIs
GET	/media/intelligence	Outlets, tone, threads
GET	/survey/summary	Weighted estimates, MoE
GET	/field/operations	Completion, bottlenecks
GET	/digital/scorecard	Scorecard vs targets
GET	/alerts	Alert queue
GET	/compliance/items	Approval, cert, AI label
GET	/lineage/{metric}	Source-to-metric graph
POST	/ai/query	Facts, citations, confidence

ROADMAP

30 / 60 / 90 days to a full Command Center — then the election cycle

30 days Foundation

- Indian-region cloud, SSO/MFA/RBAC
- Source registry; 10–15 sources
- Metric store v1
- Overview, Digital, Social, Field
- Automated daily report

60 days Intelligence

- Media, Survey, Issue, Geo modules
- Regional-language NLP
- Alert tuning; experiments
- Compliance tower v1

90 days AI + Automation

- AI Analyst GA + eval harness
- RAG library; forecasting
- Weekly report automation
- War-room screens; DR & pen-test

Pre-campaign	Campaign	High-intensity	Final phase	Poll day	Post-poll
Baselines, Wave 0, taxonomy, authorisations	Daily reports, alerts, MCC-aware workflows	Intraday refresh, 24×7 war-room, DR standby	Silence-period guard; no publishing workflows	Operational analytics, incidents, misinformation-risk triage	Measurement, spend reconciliation, deletion

COMMERCIAL MODEL

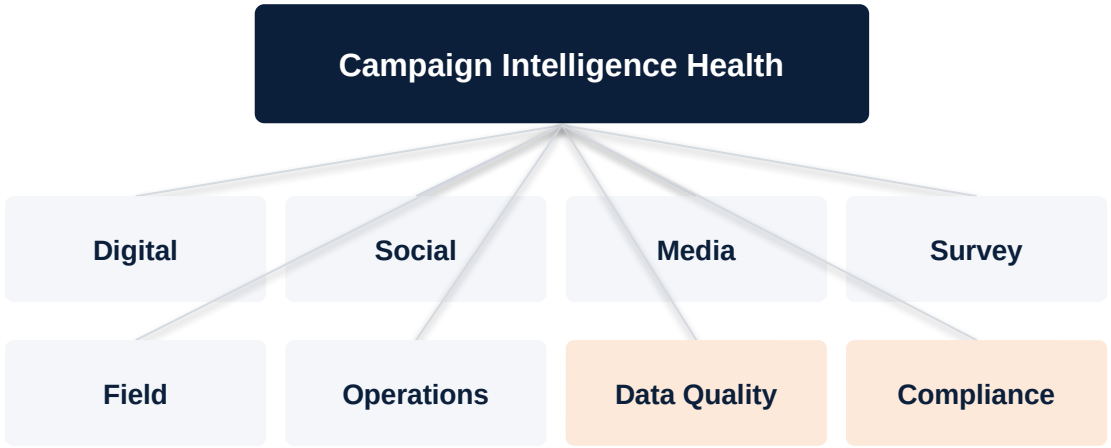

Transparent components across three tiers (indicative INR, excl. GST)

Component	Starter	Professional	Enterprise
Typical scope	1 AC / by-election, 8–12 wks	1 PC or ≤ 10 ACs, 3–6 months	Multi-constituency / state
Core team	6–8 FTE	12–15 FTE	30–60 FTE
POC (4–6 weeks)	₹18–35 lakh	₹18–35 lakh	₹25–45 lakh
One-time setup	₹15–30 lakh	₹40–80 lakh	₹1.2–3.0 crore
Monthly analytics retainer	₹12–22 lakh	₹30–50 lakh	₹0.8–2.0 crore
Technology / platform fee (monthly)	₹1.5–3 lakh	₹4–8 lakh	₹10–25 lakh
Cloud / API (monthly, pass-through)	₹0.5–1.5 lakh	₹2–6 lakh	₹8–30 lakh
24×7 war-room (per pod / month)	Optional ₹8–12 lakh	₹10–15 lakh	Included
Survey vendor · field enablement · custom AI · travel	Quoted / at actuals	Quoted / at actuals	Quoted / at actuals

Indicative only; final commercial proposal depends on constituency, election timeline, data availability, staffing, SLA and technology requirements.

KPIS & VALUE

We measure what the platform can credibly change — not election outcomes

- **Leading:** issue velocity, ER, field completion, alert ack time
- **Lagging:** survey awareness, cumulative reach
- **Diagnostic:** platform, format, theme, zone mix
- **Data-quality:** freshness, coverage, test pass rate, n_eff

−60%
analyst time on recurring reports

≥ 70%
report content auto-generated

≤ 2 h
issue onset → alert (priority sources)

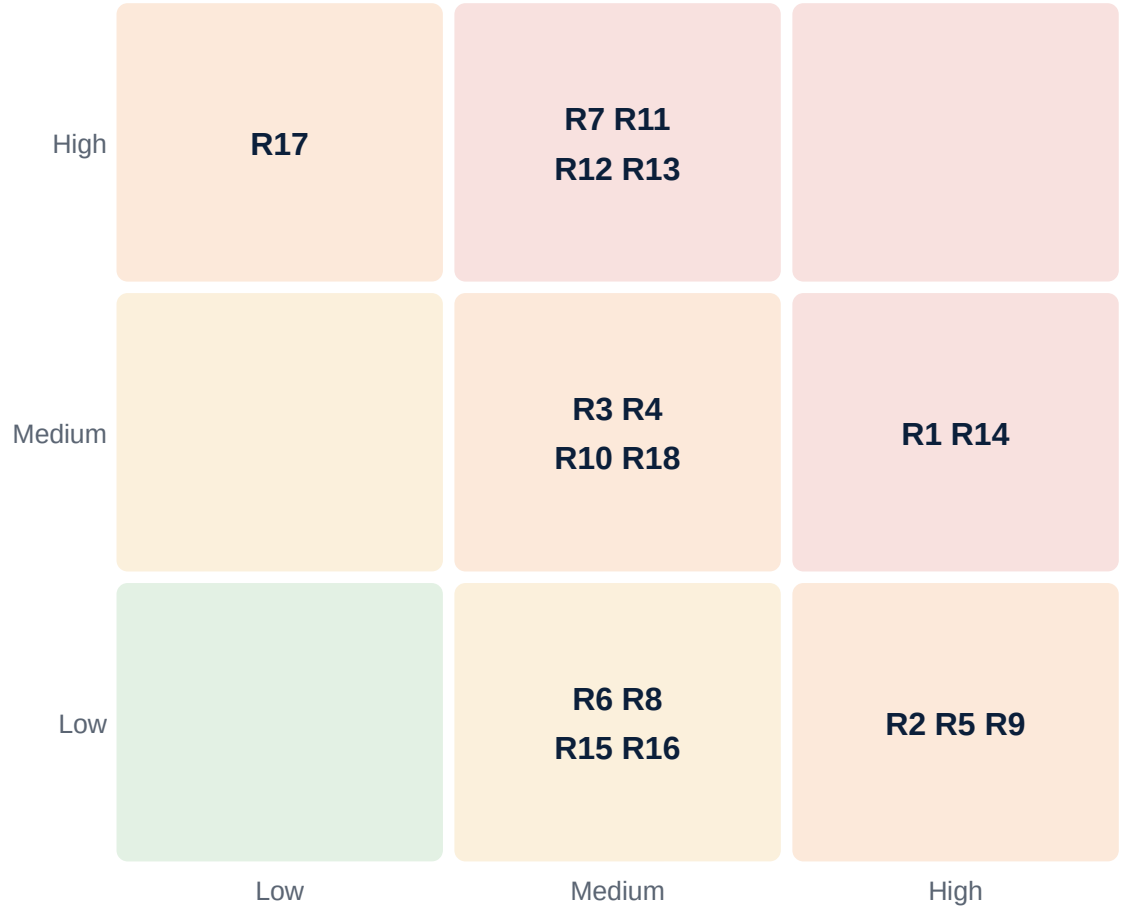

100%
paid / AI items with complete compliance record

≥ 80%
weekly active leadership users

≥ 95%
field activities with structured reports

RISKS & MITIGATION

Named owners, explicit mitigations — no surprises

Rows: impact · Columns: probability (full 18-risk register in PRD §30)

Risk	Mitigation	Owner
R1 Poor data quality	Quality gates, badges, data-ops rota	Data Eng Lead
R5 Social ≠ electorate	Coverage index, caveats, triangulation	Analytics Lead
R7 LLM hallucination	Tool-first, numeric & citation checks	ML Lead
R11 Compliance breach	Blocking rules, legal sign-off	Compliance
R12 Privacy	Minimisation, purpose tags, audits	Privacy Lead
R13 Cyber	SSO/MFA, least privilege, pen-test	Security Lead
R14 Expectations	Explicit non-promises, acceptance criteria	Programme Dir.

BOUNDARIES & DEPENDENCIES

Clear expectations protect the campaign, the agency and the partner

What we will not promise

- ✕ Guaranteed election outcome
- ✕ Exact vote prediction
- ✕ Complete voter-preference prediction
- ✕ Individual political-belief inference
- ✕ Unauthorised personal-data access
- ✕ Secret tracking
- ✕ Illegal scraping
- ✕ Private-message monitoring
- ✕ Guaranteed viral content
- ✕ Guaranteed persuasion
- ✕ Guaranteed ROI

What we need from you

- ✓ Campaign scope, geography, timeline
- ✓ Existing data & authorised first-party data
- ✓ API / dashboard access for owned accounts
- ✓ Survey data & methodology
- ✓ Field report formats & media-monitoring access
- ✓ Named compliance & legal contacts
- ✓ Cloud preference & security requirements
- ✓ Reporting cadence, decision-makers, SLA
- ✓ Language priorities & annotators
- ✓ Brand assets — only with authorisation

From Campaign Data to Campaign Intelligence

Unified data. Trusted analytics. AI-assisted intelligence. Faster decisions.

Platform	Team	Technology	Governance	Measurable outcomes
Command Center, AI Analyst, alerts, compliance tower	Data scientists, engineers, analysts — sized to the election	Governed warehouse, multilingual NLP, grounded AI	Privacy by design, audit trails, responsible AI	Faster reporting, earlier detection, better data

Next step: approve a 4–6 week POC with 13 measurable acceptance criteria.

No guaranteed outcomes — guaranteed rigour, transparency and accountability.
